

THE CEILING CHALLENGE

— *Assessing Your True Score Potential* —

Purpose

After weeks of building your process in the program, this challenge gives you a rare look at what your score actually is when timing pressure is removed entirely.

What You'll Gain

Clarity. You will see, in real numbers, the gap between what you know and what you're currently able to demonstrate under standard timing. That gap is not a flaw, it's your remaining opportunity tied to pacing and maintaining accuracy under pressure.

The Challenge

You will take a full-length test with no time limit, giving yourself as much time as needed on every question. NOTE: No outside resources are allowed though aside from a graphing calculator for the Math. The goal is to apply everything you've learned, your protocols, your error awareness, your process, without the added variable of the clock.

Completion Reflections

1. How large was the gap between your timed and untimed performance, and **what does that gap tell you?**
2. Which questions did the **extra time help you get right** that you would have otherwise missed?
3. Based on what you saw today, **what's the next thing to work on** to close that gap?
